Items crossed out on forms PTO-1449 are duplicate entries.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2, 6-13, 21-25, and 27-33 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Yguerabide et al (U.S. Patent Application Publication 2002/0028519). Yguerabide et al teaches a nucleic acid molecular hybridization assay for mRNA expression on a solid support, the solid support having bound to it nucleic acids complementary to mRNAs and the mRNAs being assayed by hybridization of poly(A) sequences bearing light scattering particles (*e.g.*, gold particles). See Yguerabide et al at paragraph 0592. In addition, Yguerabide et al teaches the use of gold particles (*e.g.*, paragraphs 0228, 0246, 0252, 0255, and 0258-03010, silver stains (*e.g.*, paragraphs 0027-0038, 0073, 0088, and 0228), and the collection of the reagents necessary to run the assays into kit form (*e.g.*, paragraphs 0006, 0008, 0083, 0089, 0117, 0176, and 0476-0484). Thus, the claims embrace the methods and compositions of Yguerabide et al.
